

IFAD TS provides a comprehensive FAC and AO trainer to Danish Army Combat and Fire Support Centre

IFAD, a leading provider of simulation and training solutions to the Defence sector is proud to announce that a comprehensive simulation based Forward Air Controller and Artillery Observer training system has been delivered to the Danish Army Combat and Fire Support Centre (ACFSC) at Oksbol Barracks.

Wednesday December 16th IFAD was present at the ACFSC at Oksbol Barracks to deliver the latest update to the IFACTS simulation and training system. This delivery was the result of a follow-on contract awarded to IFAD by ACFSC and the Danish Acquisition and Logistics Organisation (DALO). The delivery also included an update to the integrated F-16 ACT simulator.

Significant new features and training options has been added to the IFACTS solution to make it an 'All-in-One' FAC and AO training solution. This will increase the value for ACFSC and the students being trained as Forward Air Controllers (FAC) or artillery observers (AO).

The All-in-One FAC and AO solution enables ACFSC to execute all of the basic training for FACs and AOs on the IFACTS system prior to going into the field and conduct live training.

IFACTS supports training and education of students in the classroom in a realistic life like environment prior to their live fire exercises. It saves crucial resources, and at the same time creates a firm foundation for evaluation of the individual students' abilities in respect to act as FAC and/or AO in the future.

Based on the new features IFACTS supports the increased focus of Danish Defence on Joint Operations. With IFACTS a variety of Joint Operation scenarios can be trained. IFACTS therefore adds extra value to the training and the following live exercises.

IFACTS is a comprehensive mobile PC-based simulation based training solution. IFACTS supports education and training, and provides features for training FACs supported by pilots (Close Air Support) and AO (Call for Fire) procedures. IFACTS has a wide range of simulated customer-required equipment, which is utilized during the training. IFACTS also enables for in-training Battle Damage Assessment (BDA) and After Action Review (AAR). The IFACTS solution integrates with several other simulators as well as training and battle management systems, and thereby establishes a strong foundation for complex joint training scenarios.

About IFAD TS A/S:

IFAD is a Danish company and a leading provider of simulation based training solutions. Our solutions focus on mission-critical training. IFAD provides training and interoperability solutions to military customers. In addition, IFAD provides adaptation, integration, support and maintenance.
